

L O F T

Cuddly, light, breathable and supporting

The high-tech fiber S-LOFT combines the advantages of natural down feathers with the impassiveness of the synthetic fiber and the supporting force of the visco foam.

Due to the excellent restoring force it is extremely washable and sturdy. The pillow is even washable up to 95° C and can be put in the dryer.

Not only functionality, but also design and appearance is in the focus of Stendebach.

Having our new collection S-LOFT granted with the German Design Award Special Mention 2019 therefore is a great honour to us.

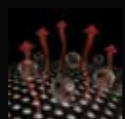

Your Benefits:

warming

light

breathable

easy-care

High-End Fiber S-LOFT

Nature & Technology

Distinguishable Benefits

SCHLAFKULT®
Duvet and Pillow Innovation by STENDEBACH

The new collection S-LOFT is a symbiosis of naturalness and newest technology. Smooth cotton in the outer fabric encloses the synthetic duo-hollow-fiber S-LOFT. The fiber was developed especially for the area of bedding and combines the advantage of down feathers with the impassiveness of synthetic fibers.

L O F T

Pillow S-LOFT

Supporting, light and breathable

The outer fabric out of champagne-colored down-percale (100% cotton) is soft and comfortable in handling. The anthracite-colored cord underlines the premium approach of the product. The pillow is extremely robust in washing up to even 95°C.

Duvet S-LOFT

Cuddly, warming and extremely light

The champagne-colored batiste (100% cotton) from the outer fabric in combination with the anthracite-colored cord, the corner edging and the one-needle-check quilting make these duvets so special. Available as light- und single-duvet.

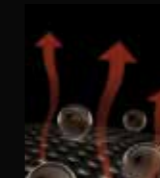

Warm

A unique warmth-weight proportion characterizes the S-LOFT-fiber technology. Air ducts pervade the fiber and provide an above-average heat capacity and good transport of moisture.

Cuddly and Light

Due to the special composition of the S-LOFT hollow-fiber the particular weight is reduced drastically. A surprising filling volume is accomplished through this special duo-hollow-fiber. An extraordinary restoring force also distinguishes this fiber. The fiber doesn't mind washing and intensive use, it always returns to its original form.

Breathable

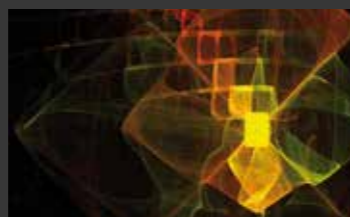

Due to the composition of pervading air ducts and the helix form of the S-LOFT hollow-fiber, the air is able to circulate ideally - without withdrawing warmth. A very good transport of moisture is warranted as well.

Easy-Care

S-LOFT products can be washed in household machines, which have the appropriate volume, without any difficulty. The S-LOFT hollow-fiber bounces back to its helix shaped structure due to the good restoring force and retains its benefits of heat capacity and moisture transportation. The pillow and duvet stay easy to care for and durable, despite frequent washing and intensive use. Therefore it is also an excellent choice for allergic people.

That's how the S-LOFT-fiber works

Duo-hollow-fiber

Two different crude fibers are fused. During the cooling the two fiber components move together variably and the typical S-LOFT fiber helix shape is created. The composition grants the fiber its vast restoring force - comparable with the restoring force of a visco foam.

The effect

Due to the numerous air intervals - similar to the composition of down feathers - an excellent heat capacity in combination with a good moisture transport is created. The high restoring force warrants a very good washability with permanent modern loft.
