Cutting Edge Technology  
for Better Sleep

## Freezing or Sweating The Challenge

Covering up, uncovering, feet in, feet out - we all know the nightly attempts to bring the bed climate to a pleasant level. Although we know, that the largest and best temperature balance takes place through the head. Sportsmen know of this phenomena as well - with a hat it is to warm, without it is to cold!  
"Normal" pillows have a very inert process, so that the body goes through an "alternating bath" of temperatures.

The core of the neck supporting pillow G-COZY PREMIUM consists of two components, which make the pillow something very special. The outer brim is a stable visco foam with high volumetric weight, in the middle part G-COZY-Gel was included, in which centric vertical channels take care of a good ventilation and at soft pressure the Breeze Effect initiates.

The G- COZY Core is free movable and therefore flexible in any position - without loosing its supporting property. A supporting and cuddly figuline pillow, shippable in three different heights.

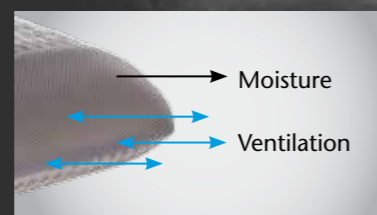

## The Solution

### G-COZY PREMIUM Neck Supporting Pillow and Topper

Besides the special gel filling, G- COZY PREMIUM is equipped with a gel-refined cover. The thermo-regulating cover cools actively, as soon as it encounters moisture (sweat). The active component comes from the food industry and is incorporated in the cover through patented encapsulation. Measurement results confirm the cooling effect.

### G-COZY PREMIUM Topper

Ideal temperature for genuine comfortable sleep. The good conductivity of temperature by G- COZY PREMIUM leads to a reduction of the reclining area's temperature. The positive effects, like reduction of the dermal tissue's oxygen requirement, lead to a comfortable and restorative sleep.

Lateral with classy silver-grey 3D-Klima-Pro-Border to provide ventilation and a permanent transport of moisture.

The mattress topper, of course processed with a gel-refined high-tech cover, has a summer and a winter side.

The lateral processed 3D-Border is not only an eye-catcher, but also provides better ventilation.
