+ Loft Green

Resource friendly  
beddings from Stendebach.

# + Loft Green

Comfort and responsibility hand in hand.

The new collection Loft Green is based on the need for an **especially resource friendly** but nevertheless **highly functional bedding series**. A long life cycle and the conscious decision for the usage of premium materials are always core elements of the Stendebach brand. In addition, this series especially focusses on the fibre-production processes.

For the raw material of the outer fabric, we choose **certified organic cotton**, which is processed **without any optical brighteners** and so is allowed to show its natural colour. As filling material, the series contains a combination of **two functional fibres**, which supplement each other perfectly in their attributes. Both fibres are produced **especially resource friendly and sustainable** and thereby fulfil the high demands we make.

That is how we manage to provide **ecologically responsible pillows and quilts**, which have no limitations in terms of the premium sleeping comfort known from Stendebach and the **usual low maintenance**.

The sustainable  
Loft Green  
filling

## Functionality and sustainability do not exclude each other

The filling used for the series Loft Green consists of a combination of two fibres. The Dacron® ZERO% fibre is responsible for the special stability and longevity of the material. The biodegradable TENCEL™ fibre provides an ideal sleeping climate through its high breathability and the quality to absorb moisture and in addition reduces the growth of bacteria to an absolute minimum.

## + Produced with a minimum of resources

Loft Green was developed with the goal to reach **best sleeping comfort and a high level of usage in everyday life** as well as **minimum consumption of resources**. This was finally achieved by an **ecologically progressive collection**, where protection of the environment and technology go hand in hand.

### Certified organic

For the outer fabric of the Loft Green line we pure naturalness on our agenda and use a certified organic cotton without any optical brighteners, which often give beddings their shiny white colour.

### Resource friendly

Innovation can be found inside the beddings, where the Dacron®-fibre saves 80% of carbon dioxide by the usage of recycled raw materials. Combined with the bio-based TENCEL™-Fibre, function and sustainability come together as one.

### Enriched by handcraft

No assembly-line work, but traditional, exclusive handcraft is the key to produce the special rectangular corner-borders, which allow a stable fitting inside the bed linen.

### A good choice for allergy sufferers

The combination of raw materials with a high breathability and low-maintenance with a washability up to 60°C provides a high level of hygiene. Thereby the beddings are very appropriate for allergic sufferers.

### Not using more than absolutely necessary

Through a resource friendly production process, the amount of carbon dioxide in the manufacturing of the new, eco-friendly Dacron® ZERO% fibre can be reduced by around 80%. The TENCEL™ fibre especially convinces by its natural raw material. Out of cellulose, a lyocell-material is produced in an innovative process, which is exclusively made from natural materials and thereby completely biodegradable.

## + The Loft Green product range

### Quilts Loft Green

Ecological, functional, cosy.

The special quality of the quilts from our Stendebach series Loft Green is the high comfort despite a production with minimum usage of resources. For every single component the perfect material on biodegradable basis or recycled raw materials was chosen.

Variations: Light, Medium, Warm and Combination

The secret of the Loft Green quilts lies in the mindful consideration of every detail. The outer fabric not only is made from certified organic cotton, but also comes without any optical brighteners, which are normally standard in beddings. The last finishing step of the quilts is also not made on production lines but on the world-bench, where the single-needle stepping and the border with straight corner-finish is manufactured.

### Pillows Loft Green

Sustainable, adaptable, easy to clean.

The pillows of the collection leave no wish unfulfilled in terms of everyday use as well as their ecological footprint. High support force, a long life cycle and very easy maintenance given by the removable inner pillow make the pillows an excellent choice in terms of functionality.

The pillows also use the combination of the two high-tech functional fibres Dacron® ZERO% and TENCEL™. For an ideal ergonomic adaption to every single user and his sleeping habits, the inner pillow is equipped with a zipper, that allows a quick and easy adaption of the filling volume. The pillow cover as well as the separate inner pillow can be washed at 60°C without any problems in standard washing machines and are clothes-dryer safe.

### Kids bedding Loft Green Kids

Cosy, easy to clean, sustainable.

The children's quilts and pillows are in no way inferior to their „adult“ counterparts. For especially child-friendly sleep, the quilts and mattresses feature moon-star quilting, which ensures even heat distribution. For toddlers, the flat pillow with edge seam is optimal.

Variations: Light und Medium

Uncompromisingly high quality in the Loft Green Kids mattress: the same materials are used for the outer fabric and quilted filling as for the comforter. The cover is equipped with a side climate band for ideal climatic properties. The cold foam provides ergonomically valuable lying with different degrees of hardness of the two sides. Due to the segmentation and the transverse cavities, it is also particularly breathable.
