+ S-Loft

Nature and technology united.

The new collection S-Loft is a symbiosis of naturalness and newest technology. **Smooth cotton** in the outer fabric encloses the **synthetic duo-hollow-fibre S-LOFT**. The fibre was developed especially for the area of bedding and combines the advantage of down feathers with the impassiveness of synthetic fibres.

“The special filling material of these pillows and quilts provides a sleep comfort like down feathers and on the other side offers an easy handling and impassiveness, as used from synthetic fibres,” that’s how the German Rat für Formgebung argues his granting of the **German Design Award Special Mention 2019**.

That’s how the
S-Loft fibre works

Hollow fibres – highly functional based on natural patterns:

Hollow fibres are produced synthetically, following the principles of natural materials. Finest air channels provide a highly effective moisture transport, giving positive effects for the sleeping climate and the hygiene. Furthermore, these air channels offer a high level of thermal capacity and make the fibres extremely light.

+ Outstanding advantages

S-Loft was developed to combine the **best functional qualities** of premium beddings with **easy-care and durability**. For an **unbeatable value for money** you receive sleeping comfort, that you only know from luxury beddings so far.

Cuddly and light

Caused by the special structure of the S-Loft hollow fibre the specific weight is lowered drastically. An amazing filling volume is reached by the helix-shaped form of the special Duo-hollow fibre.

Warming

A unique warmth-weight-ratio characterizes the S-Loft fibre-technology. The fibres are infused by fine air channels, which lead to a thermal capacity above average and a good moisture transport.

Breathable

Caused by the structure of the S-Loft fibres with air channels inside the fibres and the helix-shaped form the air can circulate excellently, without extracting warmth. A very good moisture transport is further assured thereby.

Easy-care

S-Loft products can be washed in standard washing machines without any problems or loss in performance. Because of the very high reset force the S-Loft hollow fibre returns in its primary structure and thereby keeps its functional qualities.

The S-Loft Duo hollow fibre:

The innovative S-Loft hollow fibre consists of two fused fibre-components, which give the material a distinctive helix-shaped appearance and thereby an enormous reset force – similar to the high supporting force of visco foam. Our manufacturing process, by producing a material with a high filling volume, allows an even lighter fibre than average hollow fibres by the exactly equal filling capacity and makes the fibre extraordinary easy to clean and long lasting.

+ The S-Loft product range

S-Loft quilts

Cuddly, warming and extremely light.

The champagne-coloured premium batiste (100% cotton) from the outer fabric in combination with the anthracite-coloured cord, the corner edging and the one-needle-check quilting make these duvets so special.

Available styles: Ultralight, Light, Medium, Warm and Combination quilt

S-Loft pillows

Supporting, light and breathable.

The outer fabric out of champagne-coloured down-percale (100% cotton) is soft and comfortable in handling. The anthracite coloured cord underlines the premium approach of the product. The pillow is extremely robust in washing up to even 95°C

S-Loft spring pillow

Innovative, supporting and flexible.

The supporting effects of the high-quality S-Loft fibre and an integrated micro pocket spring inlay are combined in this unique pillow. A flexible inner structure provides the possibility of an individual ergonomic adaption.

The outer fabric is made of down-percale (100% cotton) and rounded with a anthracite coloured cord.

S-Loft bolster and travel neck pillow

Comfort on the way.

These two comfort pillows from the S-Loft line are the ideal solution for travelling or cosy relaxing at home. The innovative hollow fibre gives the pillows an incomparable reset force, the fine down-percale made of cotton provides a very pleasant feeling on your skin
